

Premiere at the Caravan Salon 2011

HYMER presents new Exsis-i on Fiat chassis

In the compact class, the HYMER Exsis-i models embody the optimum result of 50 years of experience in motorhome production. Across the industry, they are some of the role models for very compact, weight -optimised but nevertheless comprehensively and very comfortably equipped premium motorhomes. At the Caravan Salon, HYMER is presenting the new Exsis-i generation with a new Fiat engine and a special AL-KO frame as well as technical innovations and an unbeatable all-inclusive price for comprehensive equipment fitted as standard.

Bad Waldsee, August 2011

At the Caravan Salon in Düsseldorf, HYMER is presenting the new generation of the very compact HYMER Exsis-i models to the public for the first time. The new Exsis-i models are based on a special AL-KO frame with a new Fiat Ducato, which has a very economical and environmentally-friendly (Euro 5) 2.3 litre Multijet engine with 130 hp and a six-speed transmission. On request, a more powerful engine with 148 or 177 hp is available (automatic as an option). The maximum permissible gross vehicle weight of the new models is 3.5 tonnes, whereas the mass in running order is much less than three tonnes and therefore allows a considerable payload. The astonishing unladen weight despite the comprehensive Comfort equipment is possible due to the completely wood-free body shell with patented PUAL technology for the side walls, rear and roof as well as the GRP lightweight floor. Further components which support the exemplary lightweight construction at HYMER include the lightweight AL-KO chassis, the lightweight HYMER furniture and the extremely compact vehicle dimensions.

These very compact dimensions such as the overall width of only 2.22 metres enable unbelievable manoeuvrability. The optimised weight distribution of the two 100 litre tanks (for fresh and grey water), the heater and other installations also ensures excellent handling.

A new feature is the design of the front section, which lend the Exsis-i not only a compact but also an automotive appearance. This impression is reinforced by the standard smooth aluminium plate design in Carrara White and the high quality frame windows.

At first the model versions HYMER Exsis-i 578 and 674 with twin beds will be presented in Düsseldorf. The model HYMER Exsis-i 698 with a queen-size bed is planned for the fourth quarter of 2011. All Exsis-i models are now equipped as standard with the high quality fold-down bed, which is also used in the HYMER B-Class. In the driver's cabin below there are also some new features. These include an innovative heating concept with reinforced hot air heating including a heated dashboard when parked. Generally a Truma 6000 W – installed under the seating group – ensures optimum heat distribution throughout the vehicle, including a heated platform on the seating group.

In the living area, the high quality upholstery and curtains as well as the comfortable L-shaped seating area with two 3-point belts fitted as standard promise a cosy feeling. The living area ensemble is completed by a flexible, movable table. The practical ability to fold the seat situated next to the living area door and opposite the seating group against the wall offers a large degree of additional freedom of movement.

In the kitchen, HYMER provides home-from-home comfort with lots of storage space, extra-wide drawers, a large refrigerator and innovative technology. You also feel at home in the bathroom. The easy-to-clean, high quality bench toilet and shower with two drains are very convenient. The well designed bathroom equipment with numerous additional shelves and compartments provides lots of storage space. In the sleeping area, high quality 7-zone cold foam mattresses with a sturdy, aerated base ensure a good night's sleep.

The opulent standard equipment is an unbeatable selling point at a fantastic all-inclusive price from EUR 61,990 in Germany. This price may vary in other countries due to different tax rates. Apart from the above-mentioned features, the standard equipment includes the awning light with a rain deflector, the living area door with fly screen and electrically operated step, an illuminated wind-up skylight in the living area, innovative LED lighting throughout the vehicle as well as four sockets; plus the built-in radio/DVD/TV equipment with sound wiring as well as loudspeakers and a radio antenna.

All Exsis-i models are insulated for winter conditions according to a stringent test and ideally equipped for the cold season. This applies both to the body shell and to all technical installations including the water tanks, which are heated with hot air in a double shell insulated GRP tray.

Those for whom this is not enough can obtain further special Comfort extras – often electrically operated – such as an electrically operated fold-down bed or for example an electrically operated front roller blind. A hail-proof GRP roof coating and a hot air thermal floor are also available as optional extras.
